## Series LXP-100 B TO-247

100 W Thick Film Resistor for high-frequency and pulse-loading applications Version B for enforced mechanical stability

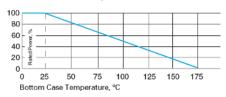

EBG Resistor offers the completely encapsulated and insulated TO-247 package for low ohmic value and Non-Inductive design for high-frequency and pulse-loading applications. Ideal use for power supplies. The LXP-100 B series is rated at 100 W mounted to a heat sink.

#### **Features**

- 100 W operating power
- TO-247 package configuration
- Single-screw mounting simplifies attachment to heat sink
- A fully molded housing for environmental protection
- Resistor package completely insulated from heat sink
- Tube packing available (packing unit: 35 pcs. / tube)
- For perfect heat dissipation, the use of mounting clamps is suggested (ask for details)
- Non-Inductive design
- ROHS compliant
- Materials in accordance with UL 94 V-0

### **Power Rating**

Derating (thermal resist.) LXP-100 B: 0.66 W/K (1.5 K/W)

Without a heat sink, when in open air at 25°C, the LXP-100 B is rated for 3 W. Derating for temperature above 25°C is 0.023 W/K.

Case temperature must be used for definition of the applied power limit. Case temperature measurement must be done with a thermocouple contacting the center of the component mounted on the designed heat sink. Thermal grease should be applied properly.

\* This value is only applicable when using thermal conduction to heat sink Rth-cs <0.025 K/W. This value can be attained by using a thermal transfer compound with a heat conductivity of 1 W/mK. The flatness of the cooling plate must be bettern than 0.05 mm overall. Surface roughness should not exceed 6.4  $\mu m$ .

# Technical Specifications

| Resistance value            | $0.05~\Omega \leq 1~M\Omega$ (higher values on special request)  |
|-----------------------------|--|
| Resistance tolerance        | ±10 % to ±1 %  |
| Temperature coefficient     | > 10 $\Omega$ : $\pm 50$ ppm/°C referenced to 25°C, $\Delta R$ taken at $\pm 105$ °C (other TCR on special request for limited ohmic values) |
| Power rating                | 100 W at 25°C bottom case temperature derated to 0 W at 175°C  |
| Short time overload         | 1.5x rated power with applied voltage not to exceed 1.5x V max. for 5 seconds, $\Delta R < \pm (0.50~\%~+~0.0005~\Omega)$                    |
| Maximum operating voltage   | 350 V max. 500 V on special request  |
| Insulation resistance       | > 10 GΩ at 1,000 V DC  |
| Dielectric strength voltage | 1,800 V AC   |
| Dieletric strength          | MIL-STD-202, method 301 (1,800 V AC, 60 sec.) $\Delta R < \pm (0.15~\%~+~0.0005~\Omega)$   |
| Load life                   | MIL-R-39009D 4.8.13, 2,000 hours at rated power, $\Delta R < \pm (1.0 \% + 0.0005 \Omega)$   |
| Moisture resistance         | -10°C to +65°C, RH > 90 % cycle 240 h, $\Delta R < \pm (0.50~\% + 0.0005~\Omega)$  |
| Thermal shock               | MIL-STD-202, method 107, Cond. F, $\Delta R < \pm (0.50~\% + 0.0005~\Omega)$   |
| Terminal strength           | MIL-STD-202, method 211, Cond. A (Pull Test) 2.4 N $\Delta R < \pm (0.20~\% + 0.0005~\Omega)$  |
| Vibration, high frequency   | MIL-STD-202, method 204, Cond. D, $\Delta R < \pm (0.40~\% + 0.0005~\Omega)$   |
| Inductance (serial)         | typical 20 nH  |
| Lead material               | tinned copper  |
| Mounting - max. torque      | 0.9 Nm M4 using a M3 screw and a compression wahser mounting technique   |
| Weight                      | ~4 g   |

**Power Resistors** 

## Series LXP-100 B TO-247

100 W Thick Film Resistor for high-frequency and pulse-loading applications Version B for enforced mechanical stability

#### **Dimensions in mm [inches]**

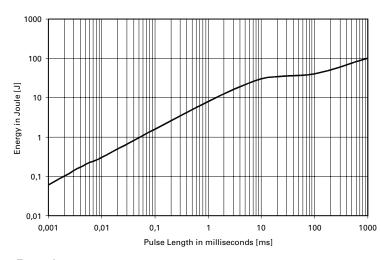

#### Pulse Energy Curve (typical rating for LXP-100 B)

Note: These energy values are reference values -> depending on ohmic value and used resistive paste, a variation in max. energy load capability is possible

#### Test procedure

Every test resistor was mounted with thermal compound (0.9 W/mK) on a water cooled heatsink

- Constant inlet water temperature: +50°C
- The test time of each tested resistor: 10min.
- Break time between two pulses: 1sec.
- To determine good / defect parts the ohmic value was measured before and after tests: a change of tolerance of more than 0.1% means defect

## **Description of Pulse Energy Curve**

- Shape of pulse = e-function
- Time between two pulses = 1 second
- Pulse length = time constant of 1 tau (1 means ... tau = 1ms)

#### Example

At 0,05 ms tau the LXP-100 B can withstand an energy level of about 1 J, when the pulse pause time is  $\geq$  1s

At a symmetrical frequency > 1 kHz at pulse length ≥ 10 µsec. the maximum applied pulse energy for LXP-100 B is an result out of the normal power 100 W divided by the operating frequency (at 25°C bottom case) (E = 100 W / F)
